To whom it may concern:

June 2, 2006

All Transition Networks products are now available for shipment in compliance with the European Union Commission Decision as of August 18, 2005, Directive 2002/95/EC on the Reduction of Hazardous Substances (RoHS), which takes effect on July 1, 2006.

The RoHS Directive prohibits the sale into the European Union of electronic equipment containing certain amounts of lead, mercury, hexavalent chromium, polybrominated biphenyls (PBBs) and polybrominated diphenylethers (PBDEs). Their maximum contents are defined at a maximum concentration value of less than 0.1% by weight in homogenous material. An additional substance, cadmium, is restricted to 0.01% in homogenous material.

The RoHS Directive allows a lead-in-solder exemption for telecommunication products and Transition Networks will be taking this exemption. Our component vendors and sub-contract manufacturers are continuing to remove lead from the entire process whereby this exemption will no longer be required.

There is no change in the model number or ordering procedure.

For further information please contact me by email;

A handwritten signature in dark ink, appearing to read "Stephen Anderson", is written over a horizontal line.
