S4110-4848
Install Guide

10 Gbps Fiber-to-Fiber Converter
- Supports various physical media types
- Fiber repeater, performs 3R signal regeneration
- Link pass through
- Auto link restore
- Fiber loopback
- No packet size limitation

Introduction

Transition Networks’ two-port S4110 series is a 10 Gbps Fiber-to-Fiber Converter supporting data rates from 1G to 11.5G bps; this fiber-to-fiber port converter has two SFP+ slots and performs full 3R (re-amplify, re-shape, and re-timing) signal regeneration. It can be used all alone or it can be connected to another x4110, providing fiber-to-fiber conversion in the following user networks:

- 10G LAN, 10G WAN
- 10G Fiber Channel
- SONET OC192
- 10G OTN (G.709)

The S4110 can be used in telecom and enterprise applications where 10 Gbps links require fiber extension or where 10 Gbps links require an interface between two different types of fiber. The S4110 performs a wide variety of protocol transparent service; it supports virtually any protocol from 1 Gbps to 11.5 Gbps:

- 10G LAN (10.3125 Gbps) / WAN (9.95 Gbps)
- SONET OC-192/SDH STM-64 at 9.95 Gbps
- 10G Fiber Channel at 10.52 Gbps
- 1/2/4/8 Gbps Fiber channel
- OTU2 at 10.709 Gbps
- OTU1e at 11.05 Gbps
- OTU1f at 11.27 Gbps
- OTU2e at 11.09 Gbps
- OTU2f at 11.32 Gbps
- SONET OC-48/SDH STM-16 at 2.40 Gbps
- Legacy 1G Ethernet at 1.25 Gbps
- Any other rate from 1 - 11.5 Gbps

Models

The S4110 is an ION Stand-alone device. The C4110 is an ION chassis slide-in-card.

The S4110 is used as remote device when linked back to a managed chassis card.

The C4110 SIC card can be managed by ION Web, ION CLI, or Focal Point 3.0. The S4110 can not be remotely managed.

Manageable C4110 features are available when used in an ION Platform chassis along with an ION Management Module (IONMM). The x4110 is delivered with a default configuration. You can change the configuration via the ION Web interface, Focal Point 3.0, and the ION CLI.

Document Overview

The purpose of this manual is to provide the information needed to install the S4110 to the point of operation. Note that there is a separate install guide for the C4110.

Related Manuals and Online Help

A printed documentation card is shipped with each S4110 device. A substantial set of technical documents, white papers, case studies, etc. are available on the Transition Networks web site at https://www.transition.com. Note that this manual provides links to third party web sites for which Transition Networks is not responsible. Other ION system and related device manuals are listed below.

1. Product Documentation Postcard, 33504
2. ION C4110 Install Guide, 33572
3. ION S4110 Install Guide, 33573 (this manual)
4. ION x4110 Web User Guide, 33574
5. ION x4110 CLI Reference, 33575
6. Focal Point™ 3.0 Management Application User Guide, 33293
8. ION System NID User Guides (33432, 33457, 33472, 33493, 33494, 33495, 33496)
9. Release Notes (firmware version specific)

Note: Information in this document is subject to change without notice. All information was deemed accurate and complete at the time of publication. This manual documents the latest software/firmware version. While all screen examples may not display the latest version number, all of the descriptions and procedures reflect the latest software/firmware version, noted in the Record of Revision on page 20.
Application Examples

The S4110 provides up to 10Gig fiber-to-fiber port repeating and performs full 3R (re-amplify, re-shape and re-timing) signal regeneration. The figures below show how x4110 devices can be used in pairs (scenarios A,B,C below) or used as single repeater in a customer network (scenarios D & E below); It can also interconnect with an x4110-1048 (scenario F).

Figure 1: Network Scenarios
Pre-Installation

CAUTION: Observe electrostatic discharge precautions when handling the S4110. Failure to observe this caution could result in damage or failure of the S4110.

Safety

Before installing the S4110, read these “Safety Cautions” and ensure that the requirements noted are met. During installation and maintenance, avoid direct exposure to laser beams. Specifically, do not look into laser ports. Ensure that each SFP/SFP+ port at which laser beams are (or will be) present is occupied by an SFP/SFP+ that is locked in position. See the related SFP/SFP+ manual for details. See “Electrical Safety Warnings” on page 19 for Electrical Safety Warnings translated into multiple languages.

Unpacking

1. Carefully unpack all S4110 contents.
2. Verify receipt of all S4110 components; see “Ship Kit Contents” below.
3. Place the S4110 and related materials in the desired install location.
4. Save the S4110 shipping carton and packing materials for future use.

Ship Kit Contents

The S4110 is shipped with some standard and some optional components. Make sure you have received the following standard items:

- One S4110 device
- One AC Power Cord/Adapter
- One printed Product Documentation postcard
- Four Rubber feet
**DIP Switch SW1 (Function Settings)**

The 8-position DIP switch is labeled CONFIG SWITCHES on the right side of the S4110 enclosure. The factory default setting is SW1 – 8 in the **ON** position (Down). SW5 - 8 settings are not used (‘do not care’). Use a small, flat-blade screwdriver (or similar tool) to set the DIP switches to site requirements.

![Image of DIP Switches](image)

**Note 1:** Component labeling may vary; the figure above shows SW 1-8 in the position labeled ‘**ON**’ (Down).

Installation and Setup

General
This section describes how to install the S4110 and the procedures to access and initially set it up via either a local serial interface (USB) or a remote Ethernet connection (Telnet session or Web interface).

Install the S4110
The S4110 is a standalone module that can be deployed on its own or it can be connected to a C4110 ION Chassis card installed in a Transition Networks ION chassis (ION001-x and ION219-x). A complete list of ION platform products is at https://www.transition.com.

The following section describes how to install the S4110.

⚠️ Caution: Failure to observe electrostatic discharge precautions when installing the S4110 could result in damage or failure of the module.

1. Locate the S4110 in its final install location.
2. Install SFP or SFP+ Devices in PORT 1 and PORT 2. See “Installing SFP/SFP+ Devices” below.
3. Perform cabling to the S4110. See the “Cabling” section on page 9.
4. Make the Power Connection. See the “Power Connection” section on page 10.
5. Note that the card’s Power LED lights. See “Power and Fiber Status LEDs” on page 11.
Installing SFP/SFP+ Devices

The C4110 lets you install SFP/SFP+ devices of choice to make a fiber connection. The C4110 has two SFP/SFP+ ports. The locations of PORT1 and PORT 2 (SFP/SFP+) are shown below. **Note**: The S4100 is an “any rate to same rate” device, meaning the two SFPs used must both support the same data rate. However, two SFPs can support different types of fiber and different transmission distances.

SFP/SFP+ Optical Transceivers

Transition Networks SFP and SFP+ devices are small form factor, hot-pluggable transceivers which allow for a single piece of network equipment to be connected to a multitude of interfaces, protocols, and transmission media via the SFP/SFP+ port. All of Transition's SFPs and SFP+ devices are compliant with the Multi-Sourcing Agreement (MSA) ensuring interoperability with all other MSA compliant networking devices.

The SFP/SFP+ module used defines the fiber length and type that can be supported. Identical SFP/SFP+ modules must be used at each end of the fiber link for each port on this device.

![Figure 3: Port Locations and SFP/SFP+ Installation](image)

To install an SFP/SFP+ device in the C4110:

1. Position the SFP/SFP+ device at either installation slot, with the label facing up.
2. Carefully slide the SFP/SFP+ device into the slot, aligning it with the internal installation guides.
3. Ensure that the SFP/SFP+ device is firmly seated against the internal mating connector.
4. Connect the fiber cable to the fiber port connector of the SFP/SFP+ device.

See the TN [SFP webpage](https://www.transition.com/) for the latest SFP information.
**Cabling**

The C4110 can be used in telecom and enterprise applications where links supporting data rates from 1Gig to 10Gig require fiber extension or where 10Gig links require an interface between two fiber networks. It performs 3R (re-amplify, re-shape, re-time) signal regeneration. The S4110 is protocol 'agnostic', supporting a wide variety of protocols in a network; from 1 to 11.5Gbps, including 10G LAN, 10G WAN, 10G Fiber Channel, SONET OC192, 10G OTN (G.709), 1/2/4/8 Gig Fiber Channel, 1 Gig Ethernet, or Sonet OC-48. The fiber length and type is defined by the SFP+ module inserted.

![Figure 4: C4110-to-S4110 Connection](image)

The figure above shows cabling a C4110 to an S4110. The S4110 cabling procedure is provided below.

1. Locate a fiber cable with male, two-stranded TX to RX connectors installed at both ends. See "Cable Specifications" on page 15 for details.

2. Connect the fiber cable to the 10GE SFP+ fiber port (Port 2 labeled **10GE SFP+**) on the C4110:
   - Connect the male TX cable connector to the female TX connector.
   - Connect the male RX cable connector to the female RX connector.

3. Connect the fiber cables to the 10GE fiber port on the other device per the device requirements.

![Figure 5: Fiber Connection](image)
**Power Connection**

The S4110 ships with a power supply module that provides power via a barrel connector to the S4110 power receptacle.

![Power Supply Module](image)

*Figure 6: Power Connection*

Make the power connection as described below.

1. Plug the power supply's barrel connector into the standalone module. See the figure below.
2. Plug the power supply's cord into a live AC power outlet.
3. Verify that the green **PWR** (Power) LED lights.
Operation

Power and Fiber Status LEDs
The status LEDs (labeled PWR and LINK are shown below. Use the status LEDs to monitor S4110 operation in the network.

![Power and Fiber Status LEDs](image)

The Power and Fiber Status LEDs are described below.

<table>
<thead>
<tr>
<th>LED Label</th>
<th>Meaning</th>
<th>Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>PWR</td>
<td>Power</td>
<td>Green ON for power applied to board.</td>
</tr>
<tr>

<td>Fiber Status 1</td>
<td>On = Fiber Signal Detected.</td>
</tr>
<tr>
<td>PORT 2 LINK</td>
<td>Fiber Status 2</td>
<td>Off = Fiber Signal Not Detected.</td>
</tr>
</tbody>
</table>

Link Pass Through (LPT) Feature
This function causes loss of link on one side of a media converter to be passed through to the other side, so that upstream equipment can see fault conditions that would otherwise be hidden by the media converters.

The LPT feature allows the Device to monitor the Fiber RX (receive) ports for loss of signal. For example, when the Fiber #1 link on the near end device is lost (1), the local Device turns off the fiber transmit on Fiber #2 (2), thus, “passing through” the link loss. The remote Device disables the Fiber #1 link to the far-end device (3), which prevents the loss of valuable data unknowingly transmitted over an invalid link.

Note that although the link from local fiber #2-Tx to remote #2-Rx is disabled, the link from remote #2-Tx to local #2-Rx is still alive(4). The LPT process is illustrated in the figure below.

![Link Pass Through (LPT)](image)
Technical Specifications

Standards: IEEE802.3ae / ITU.G.709 / SFF8431

Data Rate: 10 Gbps

Dimensions:
- Width: 0.86” [21.85 mm]
- Depth: 6.5” [165 mm]
- Height: 3.4” [86.36 mm]

Power Source:
- External AC/DC power supply
- Supplied AC Power Cord/Adapter

Power Consumption: 4.2W (350mA @12V)

Operating Temperature: 0 to 50 degrees C

Storage Temperature: -40 to 85 degrees C

Altitude: 0-10,000 feet

Operating Humidity: 5% to 95% (non-condensing)

Shipping Weight: 2 lbs. (0.90 Kg.)

MTBF with Power Supply:
- Greater than 41,660 hours (MIL-HDBK-217F)
- Greater than 114,580 hours (Bellcore)

MTBF without Power Supply:
- Greater than 250,000 hours (MIL-HDBK-217F)
- Greater than 687,000 hours (Bellcore)

Regulatory Compliance for:
- Emission: FCC Class A; EN55022 Class A
- Immunity: EN55024
- Safety Compliance: CE Mark
- Warranty: Lifetime
- Max. Frame Size: 16384 bytes jumbo frame support

The information in this user’s guide is subject to change. For the latest information, see the online user’s guide at: https://www.transition.com.

WARNING: Visible and invisible laser radiation when open. DO NOT stare into the beam or view the beam directly with optical instruments. Failure to observe this warning could result in an eye injury or blindness.

WARNING: Use of controls, adjustments or the performance of procedures other than those specified herein may result in hazardous radiation exposure.
**Cable Specifications**
The physical characteristics must meet or exceed IEEE 802.3™ specifications.

**Fiber port:** SFP+, both Class-I and Class-II, 10.3125Gbps.

**Cable Types**
The cabling specifications are provided for reference and troubleshooting purposes.

**Fiber (10GbE) Cabling**
The two general types of fiber optic cables are SMF (single-mode fiber) and MMF (multi-mode fiber).

**SMF** has an optical core of approximately 9 μm (microns), and has lower modal dispersion than MMF, and can support distances of at least 10 Km and as high as 80-100 Km (Kilometers) or more, depending on transmission speed, transceivers, etc..

**MMF** has an optical core of either 50 μm or 62.5 μm, and it supports distances up to 600 meters, depending on transmission speeds and transceivers.

<table>
<thead>
<tr>
<th>Standard</th>
<th>Cable Type</th>
<th>Core Diameter</th>
<th>IEEE Standard Distance</th>
<th>Wavelength</th>
</tr>
</thead>
<tbody>
<tr>
<td>OM1</td>

<tr>
<td>OS1</td>
<td>Single mode (SMF)</td>
<td>9 μm</td>
<td>up to 10,000m</td>
<td>1310 / 1550 nm</td>
</tr>
</tbody>
</table>

OS1 SMF optics are used for distances up to 10,000m (6.2 miles) with standard transceivers and can work at longer distances with special transceivers and switching infrastructure.

The C4110 supports:

**10GBase-SR:** The most common type of fiber-optic 10GbE cable that supports an SFP+ connector with an optical transceiver rated for 10Gb transmission speed (also known as “short reach” fiber-optic cables).

**10GBase-LR:** The “long reach” fiber optic cables that support single-mode fiber optic cables and connectors. Provides serialized data at a line rate of 10.3125 Gbit/s. 10GBASE-LR has a specified reach of 10 kilometres (6.2 mi), but 10GBASE-LR optical modules can often manage distances of up to 25 kilometres (16 mi) with no data loss.

**10GBase-ER:** The “extended reach” port type for single-mode fiber that uses 1550 nm lasers. Its Physical Coding Sublayer 64b/66b PCS is defined in IEEE 802.3 Clause 49 and its Physical Medium Dependent PMD in Clause 52. It delivers serialized data at a line rate of 10.3125 Gbit/s.

**10GBase-ZR:** An 80 km (50 mile) range ER pluggable interface, the 80 km PHY is not specified within the IEEE 802.3ae standard, and manufacturers have created their own specifications based on the 80 km PHY described in the OC-192/STM-64 SDH/SONET specifications.

Note: the interface standard used is defined by the fiber module used and is transparent to the x4110. All other standards are limiting mode (EDC disabled).

**Note:** the S4110 does not support 10GBase-LX4, 10GBase-CX4, or 10GBase-LRM.
**Optical Transport Network (OTN)**

The Optical Transport Hierarchy (OTH) is a new transport technology for the Optical Transport Network (OTN) developed by the ITU. OTH is based on the network architecture defined in ITU G.872 "Architecture for the Optical Transport Network (OTN)".

G.872 defines an architecture that is composed of the Optical Channel (OCh), Optical Multiplex Section (OMS) and Optical Transmission Section (OTS). G.872 then describes the functionality that needed to make OTN work.

Compared to SONET/SDH, using OTN offers advantages (stronger Forward Error Correction, more levels of TCM, transparent transport of Client signals, switching scalability) and disadvantages (requires new hardware and management system).

<table>
<thead>
<tr>
<th>OTU Type</th>
<th>OTU Bit Rate (Nominal)</th>
</tr>
</thead>
<tbody>
<tr>
<td>OTU1</td>
<td>255/238 x 2 488 320 kbit/s</td>
</tr>
<tr>
<td>OTU2</td>
<td>255/237 x 9 953 280 kbit/s</td>
</tr>
<tr>
<td>OTU3</td>
<td>255/236 x 39 813 120 kbit/s</td>
</tr>
</tbody>
</table>

The OTU bit rate tolerance is ±20 ppm for OTU1, OTU2, and OTU3. The nominal OTUk rates are approximately 2 666 057.143 kbit/s (OTU1), 10 709 225.316 kbit/s (OTU2) and 43 018 413.559 kbit/s (OTU3).

**Fibre Channel (FC)**

FC (Fibre Channel) is a high-speed network technology (common rates of 2-, 4-, 8- and 16-Gbps) often used to connect computer data storage. Fibre Channel is standardized in the T11 Technical Committee of INCITS (the International Committee for Information Technology Standards) an ANSI standards committee.

**Note:** When FC technology was developed, it supported only optical cabling (fiber). Copper cable support was later added, so the development committee kept the same name but changed to the British spelling ‘fibre’ for the standard. The American English spelling ‘fiber’ refers only to optical cabling, so a network using ‘fibre’ can be implemented either with copper or optical cabling.

The FC protocol has a range of speeds based on a various underlying transport media. Native FC speed variants include:

<table>
<thead>
<tr>
<th>Media</th>
<th>Line-rate (GBps)</th>
<th>Throughput (full duplex; Mbps)*</th>
<th>Availability</th>
</tr>
</thead>
<tbody>
<tr>
<td>1GFC</td>

<td>2008</td>
</tr>
</tbody>
</table>

Fibre Channel does not follow OSI Layer modeling, but is similarly split into five layers (FC0 - FC4):

**FC4:** Protocol-mapping layer, in which application protocols, such as SCSI or IP, are encapsulated into a PDU for delivery to FC2.

**FC3:** Common services layer, a thin layer that could eventually implement functions like encryption or RAID redundancy algorithms.
**SONET (Synchronous Optical Transport Network)**

Synchronous Optical Network, a standard for connecting fiber-optic transmission systems. SONET was proposed by Bellcore in the middle 1980s and is now an ANSI standard.

SONET defines interface standards at the physical layer of the OSI seven-layer model. The standard defines a hierarchy of interface rates that allow data streams at different rates to be multiplexed. SONET establishes Optical Carrier (OC) levels from 51.8 Mbps (OC-1) to 9.95 Gbps (OC-192). The international equivalent of SONET, standardized by the ITU, is called SDH.

SONET and Synchronous Digital Hierarchy (SDH) are standardized protocols that transfer multiple digital bit streams synchronously over optical fiber using lasers or highly coherent light from light-emitting diodes (LEDs). At low transmission rates data can also be transferred via an electrical interface. The method was developed to replace the Plesiochronous Digital Hierarchy (PDH) system for transporting large amounts of telephone calls and data traffic over the same fiber without synchronization problems. SONET generic criteria are detailed in Telcordia Technologies Generic Requirements document GR-253-CORE.

Both SDH and SONET are widely used today: SONET in the United States and Canada, and SDH in the rest of the world. Although the SONET standards were developed before SDH, it is considered a variation of SDH because of SDH's greater worldwide market share. SONET and SDH often use different terms to describe identical features or functions. This can cause confusion and exaggerate their differences. With a few exceptions, SDH can be thought of as a superset of SONET.

**Messages**

**Message:** Setting values failed (snmp operation error, possible reasons: invalid data, error data sequence, etc)

**Meaning:** The selected parameter setting was not recognized.

**Recovery:** Click the Refresh button to clear the error message.

**Message:** The DMI feature is not supported on current port.

**Meaning:** Either the port or the SFP does not support DMI, or an SFP is not currently installed in Port 1.

**Recovery:** Either insert an SFP/SFP+ in Port 1, or change to Port 1, or change SFPs to a type that supports DMI. See notes above for SFP DMI support.
Troubleshooting

If a problem or exception occurs, the S4110 will send a related Trap message to the Trap Server to report this event. You can launch the Trap Server in Focal Point 3.0 to capture the Trap message to better understand C4110 status.

1. Is the PWR (power) LED lit?
   NO
   • Is the C4110 inserted properly into the chassis?
   • Is the power cord properly connected to the C4110 chassis and plugged into a live grounded AC outlet?
   • Does the grounded AC outlet provide power?
   • Contact Tech Support: 1-800-260-1312, Int'l: 00-1-952-941-7600.
   YES
   • Proceed to step 2.

2. Is the LINK LED lit?
   NO
   • Check that the SFP+ device is supported and properly connected. See “Installing SFP/SFP+ Devices” on page 8.
   • Check the fiber cables for proper connection.
   • Verify that the cable specs are met. See “Cable Specifications” on page 13.
   • Contact Tech Support. See “Contact Us” below.
   YES
   • Proceed to step 3.

3. Is the CLI accessible?
   NO
   • Check the Install process. See “Installation and Setup” on page 7.
   • Check the cabling. See “Cabling” on page 9.
   • Contact Tech Support. See “Contact Us” below.
   YES
   • Proceed to step 4.

4. Is the web GUI accessible?
   NO
   • Check the Install process. See “Installation and Setup” on page 7.
   • Check the cabling. See “Cable Specifications” on page 13.
   Yes

5. Does a message display indicating that the S4110 is not discovered by the connected device?
   • Verify that the SFP/SFP+ devices at each end are identical.

6. Does the Data Rate Retiming setting match the SFP/SFP+ device being used?
   No
   • Change the Data Rate Retiming setting or change the type of SFP/SFP+ device so they match.
   Yes
   • Contact Tech Support. See “Contact Us” below.

Compliance Information

FCC Regulations
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at the user's own expense.

Canadian Regulations
This digital apparatus does not exceed the Class A limits for radio noise for digital apparatus set out on the radio interference regulations of the Canadian Department of Communications. Le présent appareil numérique n'émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la lass A prescrites dans le Règlement sur le brouillage radioélectrique édicté par le ministère des Communications du Canada.

European Regulations

Warning
This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Achtung
Dieses ist ein Gerät der Funkstörgrenzwertklasse A. In Wohnbereichen können bei Betrieb dieses Gerätes Rundfunkstörungen auftreten. In diesem Fäll ist der Benutzer für Gegenmaßnahmen verantwortlich.
Attention !
Ceci est un produit de Classe A. Dans un environnement domestique, ce produit risque de créer des interférences radioélectriques, il appartiendra alors à l'utilisateur de prendre les mesures spécifiques appropriées.

In accordance with European Union Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003, Transition Networks will accept post usage returns of this product for proper disposal. The contact information for this activity can be found in the 'Contact Us' portion of this document.

CAUTION: RJ connectors are NOT INTENDED FOR CONNECTION TO THE PUBLIC TELEPHONE NETWORK. Failure to observe this caution could result in damage to the public telephone network.

Der Anschluss dieses Gerätes an ein öffentliches Telekommunikationsnetz in den EG-Mitgliedstaaten verstößt gegen die jeweiligen einzelstaatlichen Gesetze zur Anwendung der Richtlinie 91/263/EWG zur Angleichung der Rechtsvorschriften der Mitgliedstaaten über Telekommunikationsendeanwendungen einschließlich der gegenseitigen Anerkennung ihrer

**Declaration of Conformity**

Transition Networks, Inc.

10900 Red Circle Drive, Minnetonka, Minnesota 55343 U.S.A.

Declares that the product:

C4110-4848
S4110-4848

Conforms to the following Product Regulations:

Directive 2004/108/EC
Low-Voltage Directive 2006/95/EC
IEC/EN 60950-1

I, the undersigned, hereby declare that the equipment specified above conforms to the above Directive(s) and Standard(s).

Minnetonka, Minnesota
